

Concourse Modernization
Memphis International Airport
Memphis Shelby County Airport Authority
Memphis, TN

Completion Date: 2018
Project Cost: \$132 Million

Dynamix Engineering is providing mechanical and electrical engineering services for the renovation and addition to the airport. The existing concourse is approximately 387,000 SF. The project will be adding approximately 140,000 SF to provide for approximately 527,000 SF in the modernized concourse. Dynamix is working with facilities staff to determine the condition and capacities of existing equipment and integrate new systems with existing systems for central plant equipment and building automation systems. New systems are being designed to improve occupant comfort, provide for high energy performance, and upgrade aging infrastructure elements.

Dynamix Engineering's Role on the Project:

- Mechanical, electrical, and plumbing engineering
